Profile

Mobile and AI/ML developer who has shipped three production-grade projects, including a two-stage deep learning pipeline achieving 99.15% crop classification and 94.86% disease detection accuracy. Delivers full-stack development and API integration across React Native, Node.js, Django, and modern AI tooling (LangChain, RAG pipelines) for real-world clients and an AI/ML internship. Picks up new technologies as the problem demands.

Skills

Languages: JavaScript, TypeScript, Python, Kotlin, C#, C++

Mobile: React Native, Expo, Android SDK

Frontend: React, Next.js, Tailwind CSS

Backend: Node.js, Express.js, Django, Flask, REST APIs

Databases: PostgreSQL, MongoDB, Firebase (Auth, Firestore, Realtime DB), MySQL, MS SQL Server

AI/ML: TensorFlow, PyTorch, Keras, LangChain, Pillow, Scikit-learn, Pandas, NumPy

APIs & Integrations: Google Gemini, Groq, Stripe, Cloudinary

Deployment: Render, Hugging Face, Vercel

Tools: Git, GitHub, Postman, Linux, VS Code, Android Studio, Visual Studio, Streamlit

Experience

Python Developer Intern, AI/ML

- Developed 7 deep learning and machine learning models across classification, regression, and clustering tasks using Python, TensorFlow, and PyTorch.
- Designed and optimized CNN architectures as part of end-to-end model development pipelines.
- Built Django web applications that integrated trained models into production, covering data preprocessing through deployment.

Smart Algorithm (AI-SOFT) |
Faisalabad, Pakistan
Dec 2024 – Mar 2025

Freelance Mobile & Software Developer

- Delivered projects for clients across Pakistan, Saudi Arabia, Malaysia, India, and the United States, maintaining a 5.0 rating across all engagements.
- Integrated third-party APIs and resolved backend issues for React Native apps in active production use, partnering with independent developers.
- Completed client websites end-to-end, managing revision cycles and writing post-launch documentation for client handoff.

Fiverr & Independent
Clients | Local & Remote
Jan 2024 – Present

Projects

AgriGuard: AI-Powered Crop Disease Detection & Smart Water Management

AgriGuard 

Smart farming system built by a two-person team for Ag Leader, an agriculture industry client, after collecting requirements directly from the field.

- Designed a two-stage EfficientNetB3 deep learning pipeline (crop gate + disease classifier) across 10 crops and 76 disease classes, achieving 99.15% crop classification accuracy and 94.86% disease detection accuracy (0.94 macro F1).
- Built a Node.js/Express REST API, deployed on Render, with JWT auth, OTP email verification, scan history, and a MongoDB-backed pesticide advisory system covering all 76 disease classes with dosage, spray interval, and safety guidance.

- Integrated ESP32-CAM and ESP32-WROOM hardware for automated image capture and soil-moisture-triggered pump control, fully manageable from the mobile app with no on-site intervention.
- Tools: React Native, Expo, Node.js, Express, MongoDB, Flask, TensorFlow, Keras, EfficientNetB3, ESP32, Render, Hugging Face.

SpendWise: AI-Powered Personal Finance Tracker

[SpendWise](#)

AI-powered mobile finance app with an AI receipt scanner and RAG-based financial advisor, built solo end-to-end with Jest test coverage prior to release, currently in Play Store review.

- Built an AI receipt scanner using Google Gemini and Groq that replaces 5-field manual entry (merchant, amount, date, category, notes) with a single photo scan.
- Implemented a RAG-based financial advisor that retrieves the user's transaction and budget history before generating responses, grounding advice in actual spending data.
- Designed a multi-wallet system (Checking, Savings, Crypto, Cash) with cascading deletes, so removing a wallet automatically purges its linked transactions instead of leaving orphaned records
- Tools: React Native, TypeScript, Expo, Next.js, Firebase, Google Gemini, Groq, Cloudinary, React Navigation, AsyncStorage, Jest.

TalentSift: AI-Powered Recruitment & Applicant Tracking Platform

[TalentSift](#)

Recruitment platform built solo, deployed on Vercel with GitHub-connected CI/CD, live in production, handling candidate and recruiter workflows end to end.

- Implemented AI-powered screening interviews and practice interview sessions using LangChain and Groq, with automated scoring and instant feedback.
- Designed a role-based architecture (Candidates vs Recruiters) with JWT auth, Email OTP verification, and Stripe-based subscription tiers for premium AI features.
- Migrated the database from SQLite to PostgreSQL on Supabase to handle concurrent transactions required for an applicant tracking system at scale.
- Tools: Next.js, Django REST Framework, PostgreSQL, LangChain, Groq, Stripe

ReelTime: Movie Ticket Booking App

[ReelTime](#)

- Implemented real-time seat synchronization over Firebase, resolving conflicting seat selections instantly instead of at checkout.
- Automated ticket delivery by generating QR codes via ZXing immediately after booking, removing the need for physical tickets at venue entry.
- Tools: Kotlin, Android SDK, Firebase Authentication & Realtime DB, ZXing.

Education

BS Government College University Faisalabad, Software Engineering

Nov 2022 – Jun 2026

- **Coursework:** Object Oriented Programming, Data Structures & Algorithms, Artificial Intelligence, Natural Language Processing, Computer Networks, Cloud Computing
- Elected Class Representative for Basic Mathematics, coordinating between students and faculty across morning and evening sections for two semesters

Certifications

React Native Specialization | Meta – Coursera

Programming Fundamentals in Kotlin | Meta – Coursera

Introduction to Mobile App Development | IBM – Coursera

Front-End Developer Capstone | Meta – Coursera
