Profile

Software engineer with a focus on mobile development, full-stack systems, and AI integration. Since 2024, I have worked with international clients and built production applications across finance, recruitment, agriculture, and other domains. My experience includes 30+ client projects as well as independently developed and deployed products, combining mobile development, backend engineering, and AI.

Skills

Languages: JavaScript, TypeScript, Python, Kotlin, C++, C#,

Mobile: React Native, Expo, Android SDK

Frontend: React, Next.js, Tailwind CSS

Backend: Node.js, Express.js, Django, Flask, REST APIs

Databases: PostgreSQL, MongoDB, Firebase (Auth, Firestore, Realtime DB), MySQL, MS SQL Server

AI/ML: TensorFlow, PyTorch, Keras, LangChain, Pillow, Scikit-learn, Pandas, NumPy

APIs & Integrations: Google Gemini, Groq, Stripe, Cloudinary

Deployment: Render, Hugging Face, Vercel

Tools: Git, GitHub, Postman, Linux, VS Code, Android Studio, Visual Studio, Streamlit

Experience

AI/ML Developer Intern

- Designed, trained, and deployed 7 deep learning and machine learning models across classification, regression, and clustering tasks using Python, TensorFlow, and PyTorch.
- Designed and optimized CNN architectures as part of end-to-end model development pipelines.
- Integrated trained models into production Django web applications, covering data preprocessing through deployment.

Smart Algorithm (AI-SOFT) |
Faisalabad, Pakistan
Dec 2024 - Mar 2025

Freelance Mobile & Software Developer

- Delivered 30+ projects for clients across Pakistan, Saudi Arabia, Malaysia, India, and the United States, maintaining a 5.0 rating across all engagements.
- Integrated third-party APIs and resolved backend issues for React Native apps in active production use.
- Managed client communication, revision cycles, and post-launch documentation across projects spanning mobile apps, REST APIs, and full-stack web systems.

Fiverr & Independent
Clients | Local & Remote
Jan 2024 - Present

Projects

AgriGuard: AI-Powered Crop Disease Detection & Smart Water Management

Smart farming system built by a two-person team for Ag Leader, an agriculture industry client, after collecting requirements directly from the field.

AgriGuard 

- Designed a two-stage EfficientNetB3 deep learning pipeline (crop gate + disease classifier) across 10 crops and 76 disease classes, achieving 99.15% crop classification accuracy and 94.86% disease detection accuracy (0.94 macro F1).
- Built a pesticide advisory engine covering all 76 disease classes with dosage, spray interval, water mixing ratio, and safety guidance, backed by a MongoDB database and Node.js/Express REST API deployed on Render with JWT auth and OTP email

verification.

- Integrated ESP32-CAM and ESP32-WROOM hardware for automated image capture and soil-moisture-triggered pump control, fully manageable from the mobile app with no on-site intervention.
- Tools: React Native, Expo, Node.js, Express, MongoDB, Flask, TensorFlow, Keras, EfficientNetB3, ESP32, Render, Hugging Face.

SpendWise: AI-Powered Finance App

[SpendWise](#) | [Play Store](#)

Cross-platform finance app built and deployed solo to Google Play: AI receipt scanning, RAG financial advisor, and a native home screen widget.

- Implemented a RAG-based financial advisor that retrieves each user's actual transaction history, budgets, and wallet data before generating responses, grounding advice in real spending patterns rather than generic guidance.
- Built an AI receipt scanner backed by a custom Next.js API (Gemini + Groq fallback) that extracts merchant, amount, date, and category from a single photo, replacing five-field manual entry; API keys never exposed to the client.
- Built a native Android home screen widget in Kotlin with Jetpack Glance, enabling users to log transactions and view spending without opening the app.
- Tools: React Native, TypeScript, Expo, Expo Router, Next.js, Firebase, Kotlin, Jetpack Glance, Google Gemini, Groq, Cloudinary, Jest.

TalentSift: AI-Powered Recruitment & Applicant Tracking Platform

[TalentSift](#)

Full-stack AI recruitment platform built solo, live at [talentsift.live](#).

- Implemented AI-powered screening interviews and practice interview sessions using LangChain and Groq, with automated scoring and instant feedback.
- Designed a role-based architecture (Candidates vs Recruiters) with JWT auth, Email OTP verification, and Stripe-based subscription tiers for premium AI features.
- Configured a GitHub Actions CI pipeline that validates Next.js production builds and Django configuration checks on every push to main, preventing broken builds from reaching production.
- Tools: Next.js, Django REST Framework, PostgreSQL, LangChain, Groq, Stripe

ReelTime: Movie Ticket Booking App

[ReelTime](#)

- Implemented real-time seat synchronization over Firebase, resolving conflicting seat selections instantly instead of at checkout.
- Automated ticket delivery by generating QR codes via ZXing immediately after booking, removing the need for physical tickets at venue entry.
- Tools: Kotlin, Android SDK, Firebase Authentication & Realtime DB, ZXing.

Education

BS Government College University Faisalabad, Software Engineering

Nov 2022 – Jun 2026

- **Coursework:** Object Oriented Programming, Data Structures & Algorithms, Artificial Intelligence, Natural Language Processing, Computer Networks, Cloud Computing

Certifications

React Native Specialization | Meta – Coursera

Programming Fundamentals in Kotlin | Meta – Coursera

Introduction to Mobile App Development | IBM – Coursera

Front-End Developer Capstone | Meta – Coursera
